Added an Order in Order Entry and It is Skipping Order Numbers.

If you are adding an order and the order numbers, when the computer assigns them, are skipping order numbers it usually means there has been a change to the "last assigned order number" in company information.

Additionally if the software finds the next available order number in order history, the number will be skipped. Profitmaker will continue to skip numbers until it finds an order number that has not been used. You may need to change the last assigned order number in company information or dump order history and reorganize files right away.
