Delete Non-Product Packages in Manifest

In the real-time manifest special, there is an option called 'Delete Non-Product Packages.' When importing shipping manifest information into the ProfitMaker system, there may be times when imported package records do not tie to an existing order in the system. There may be various causes for these records to have no existing order number attached. Some of these records may be valid while others may be unnecessary and can be cleared.

The delete non-product packages option will delete package detail records that do not match with an existing order number. When running this function, the user will have the option to select a shipping date range for non-package records which are to be deleted.

This function does not require other users to be logged out of ProfitMaker. Therefore, it may be run during the business day.
