How Do You Setup a Service Provider?

Tammy Mason - 2022-07-18 - in Authorize.net

How Do You Set up a Service Provider?

A service provider resource must be setup with a type of Authorize.net. A type of Authorize.net can only be assigned to one service provider. A validation will be given if a service provider already exists with a type of Authorize.net.

Name - This will appear in the service lookup.

Type - Authorize.net

Level Two - Checked

Enable Customer Vault - Checked

Key - Your Authorize.net transaction key

API Login ID - Your Authorize.net API Login ID

Merchant User Name - Your Authorize.net user name

Merchant Password - Your Authorize.net Password

Preauthorize additional approval % - Percentage that will be added to the order amount when pre-authorizing the transaction.
